NetGain Technologies, Inc. Achieves Cisco SMB Select Partner Status in the US

Lexington, Kentucky – March 13, 2005 – NetGain Technologies announced today that it has achieved the small and medium-sized business (SMB) Select Partner designation from Cisco Systems®. This recognition is awarded by Cisco to organizations who meet specific program criteria of having a focused business practice in the SMB market (companies that have between 20-250 employees).

NetGain Technologies has met rigorous Cisco certified personnel levels required by an SMB Select Partner which helps to ensure that sales and support organizations are better staffed and more capable of properly selling, designing, installing, and supporting products for the SMB business marketing place. NetGain Technologies is a dedicated local resource who understands how to design and deliver a secure, reliable network infrastructure. As Cisco's go-to-market channel in the SMB segment – and experts in this space – NetGain Technologies understands the business drivers and challenges facing companies with fewer than 250 employees.

Cisco provides training, support and special resources to assist NetGain Technologies in providing the highest quality of services for all of their SMB customers. This outstanding accomplishment for NetGain Technologies demonstrates their desire to develop expertise in complex networking technologies. NetGain Technologies is a valued member of Cisco's channel partner program and this new designation sets them apart from those who may not fully understand the business concerns of companies in this market. For more information about NetGain Technologies, please visit www.netgainit.com or call 859.255.0155.
